

# ePRO-X.S

## Customized and discreet

Noise is all around us daily – but many underestimate the dangers of a noise-induced exposure. Levels of already 85 dB (decibels), depending on length and frequency of the noise, can result in permanent damage of your hearing.

The ePRO-X.S hearing protection offers high wearing comfort while having a discreet look and reliable protection.

We also offer various extras, like an antimicrobial surface coating, a useful connecting cord or a handle for quick and easy insertion or removal of your hearing protector.

... you should wear a hearing protector.

Not only an airplane makes  
a lot of noise at 135 dB. We often  
underestimate the noise our hearing  
is exposed to day by day.
